

# Math 480 (2013): Homework 7

This is homework assignment 7 for Math 480 during Spring 2013.

**\* Required**

**What is your name and student ID number? \***

**Create a 2 page LaTeX document. \***

Create a 2 page LaTeX document that is about your project. Use at least the following features from latex: at least one math formula, lists (`\begin{enumerate}`/`\end{enumerate}`), sections (`\section`), cross references (`\label` and `\ref`), and titles (`\title`, `\author`, `\maketitle`). Your solution should be a link to a directory on github that contains at least a .tex file and a .pdf file (so I can easily look at the pdf generated from your tex file without having to tex it myself). IMPORTANT: I will only grade this based on the typesetting, not on the mathematical *content* of your document.
